PROFESSIONAL SUMMARY

- **Full Stack Developer** specializing in Python, FastAPI, React/Next.js and TypeScript, with professional experience building production grade business, taxation and compliance platforms.
- Delivers features **end to end**: REST API design, relational data modeling, frontend implementation, deployment and production incident response.
- Builds **AI powered applications** using Retrieval-Augmented Generation (RAG), LLM integration and prompt engineering, improving contextual accuracy for finance and compliance use cases.
- Experienced in **production troubleshooting, CI/CD and database migrations**, resolving live incidents with minimal downtime.
- Focused on scalable architecture, maintainable code and reliable delivery within agile teams.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, HTML, CSS
Backend	FastAPI, Flask, SQLAlchemy, Node.js, Express, REST API design
Frontend	React, Next.js, TypeScript, Tailwind CSS, responsive UI development
Databases	PostgreSQL, MySQL, MongoDB, SQLite, schema design & migrations
AI & ML	Retrieval-Augmented Generation (RAG), LLM integration, prompt engineering, embeddings & vector retrieval, agentic AI workflows, Scikit-learn
Cloud & DevOps	AWS (S3, core infrastructure concepts), Linux (Ubuntu), CI/CD pipelines, Git branching & PR workflows, deployment debugging
Tools	Git, Postman, VS Code, JWT authentication, AI-assisted development tooling

PROFESSIONAL EXPERIENCE

Software Engineer, Full-Stack Developer

Xaventra | BizAdvisor Platform

Aug 2025 – Present

- Build and ship features across a 15-service production platform covering taxation, accounting, incorporation and compliance workflows, authoring 170+ merged pull requests on a 6-engineer team.
- Design and integrate RESTful APIs across FastAPI and Flask services backed by PostgreSQL, contributing to 140+ endpoints consumed by Next.js and TypeScript frontends.
- Own features end to end across 12 services, from database schema and backend business logic through frontend implementation to production release, delivering invoicing, payments, promotions and incorporation workflows.
- Diagnose and resolve production incidents through log analysis, database inspection and API tracing, restoring service with minimal downtime and documenting root causes.
- Author 46 Alembic database migrations and maintain 8 GitHub Actions CI/CD workflows, including automated migration checks, ensuring safe repeatable deployments.
- Collaborate with backend and frontend engineers across sprint cycles, contributing 380+ commits and reviewing changes across the platform's repositories.

BizAdvisor | *compliance platform for corporate secretarial firms*

- Developed scalable backend services with Flask and SQLAlchemy, integrated with React and TypeScript frontends to support complex multi-party task coordination workflows.
- Diagnosed and fixed intricate ORM relationship and data-binding defects, correcting coordinator attribution and eliminating inaccurate UI rendering.
- Refactored legacy components and resolved production issues in an agile environment, improving maintainability and system reliability.

Neurux | *domain-focused AI assistant for business & compliance*

- Contributed to Neurux, a fork of AnythingLLM, adapting it into a domain-specific AI chatbot for finance and compliance users.
- Implemented Retrieval-Augmented Generation (RAG) pipelines with embeddings and structured document retrieval, measurably improving contextual relevance and response precision.
- Engineered and iterated on prompt structures to align LLM outputs with finance and compliance domain knowledge, reducing off-domain and inaccurate responses.
- Prototyped agentic AI workflows to improve task orchestration and multi-step response quality.

SELECTED PROJECTS

Actify | AI-Powered Meeting Action Tracker [\[GitHub\]](#)

React 19, TypeScript, Node.js, Express, SQLite, JWT, Gemini AI API

- Built a full-stack application that converts unstructured meeting notes into structured, assignable action items using the Gemini LLM API.
- Implemented secure JWT-based authentication and a relational data model supporting per-user task ownership.
- Delivered task tracking, filtering and export features within a production-style layered architecture.

Customer Churn Prediction System [\[GitHub\]](#)

Python, Scikit-learn, FastAPI, Machine Learning

- Built an end to end ML pipeline predicting SaaS customer churn, covering data generation, preprocessing, feature engineering, model training and evaluation.
- Deployed a FastAPI inference service exposing both single and batch prediction endpoints.
- Optimized model performance through threshold tuning and churn-focused evaluation metrics, and packaged the project with versioned model artifacts, evaluation reports and a modular structure for maintainability.

File Organizer CLI [\[GitHub\]](#)

Python, argparse, pathlib, modern Python packaging

- Developed an installable command-line tool for rule-based file organization, with dry-run safety controls and filename collision handling.
- Packaged to modern Python standards (`pyproject.toml`, console entry point) for one-command installation.

EDUCATION

BSc (Hons) in Information Technology, Cloud Computing

2025

Sri Lanka Technological Campus

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- AWS Cloud Practitioner Training (Completed)
