PROFESSIONAL SUMMARY

- **Full Stack Developer** specializing in Python, FastAPI, React/Next.js and TypeScript, with professional experience building production grade business, taxation and compliance platforms.
- Delivers features **end to end**: REST API design, relational data modeling, frontend implementation, deployment and production incident response.
- Builds **AI powered applications** using Retrieval-Augmented Generation (RAG), LLM integration and prompt engineering, improving contextual accuracy for finance and compliance use cases.
- Experienced in **production troubleshooting, CI/CD and database migrations**, resolving live incidents with minimal downtime.
- Focused on scalable architecture, maintainable code and reliable delivery within agile teams.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, SQL, HTML, CSS
Backend	FastAPI, Flask, SQLAlchemy, Node.js, Express, REST API design
Frontend	React, Next.js, TypeScript, Tailwind CSS, responsive UI development
Databases	PostgreSQL, MySQL, MongoDB, SQLite, schema design & migrations
AI & ML	Retrieval-Augmented Generation (RAG), LLM integration, prompt engineering, embeddings & vector retrieval (FAISS), hybrid search (BM25 + RRF), RAG evaluation, agentic AI workflows, Scikit-learn
Cloud & DevOps	AWS (S3, core infrastructure concepts), Linux (Ubuntu), CI/CD pipelines, Git branching & PR workflows, deployment debugging
Tools	Git, Postman, VS Code, JWT authentication, AI-assisted development tooling

PROFESSIONAL EXPERIENCE

Software Engineer, Full-Stack Developer <i>Xaventra BizAdvisor Platform</i>	Aug 2025 – Present
• Build and ship features across a 15-service production platform covering taxation, accounting, incorporation and compliance workflows, authoring 170+ merged pull requests on a 6-engineer team. • Design and integrate RESTful APIs across FastAPI and Flask services backed by PostgreSQL, contributing to 140+ endpoints consumed by Next.js and TypeScript frontends. • Own features end to end across 12 services, from database schema and backend business logic through frontend implementation to production release, delivering invoicing, payments, promotions and incorporation workflows. • Diagnose and resolve production incidents through log analysis, database inspection and API tracing, restoring service with minimal downtime and documenting root causes. • Author 46 Alembic database migrations and maintain 8 GitHub Actions CI/CD workflows, including automated migration checks, ensuring safe repeatable deployments. • Collaborate with backend and frontend engineers across sprint cycles, contributing 380+ commits and reviewing changes across the platform's repositories.	

BizAdvisor | *compliance platform for corporate secretarial firms*

- Developed scalable backend services with Flask and SQLAlchemy, integrated with React and TypeScript frontends to support complex multi-party task coordination workflows.
- Diagnosed and fixed intricate ORM relationship and data-binding defects, correcting coordinator attribution and eliminating inaccurate UI rendering.
- Refactored legacy components and resolved production issues in an agile environment, improving maintainability and system reliability.

Neurux | *domain-focused AI assistant for business & compliance*

- Adapted Neurux, an AnythingLLM fork, into a domain-specific AI chatbot for finance and compliance.
- Implemented Retrieval-Augmented Generation (RAG) pipelines with embeddings and structured document retrieval, measurably improving contextual relevance and response precision.
- Iterated on prompt structures to reduce off-domain and inaccurate responses, and prototyped agentic workflows for multi-step tasks.

SELECTED PROJECTS

alembic-guard | Migration Safety Linter for PostgreSQL [\[GitHub\]](#) [\[PyPI\]](#)

Python, AST, Alembic, SQLAlchemy, PostgreSQL, GitHub Actions

- Built and published an open-source CLI and GitHub Action that catches Alembic migrations likely to lock Postgres tables or break running code, before they reach production.
- Analyses migrations with Python's `ast` module, with no database connection or code execution.
- Ships 10 rules with concrete zero-downtime fixes, inline and project-wide suppression, diff-only checking for pull requests, and GitHub annotation and JSON output.

DocSage | Retrieval-Augmented Question Answering from First Principles [\[GitHub\]](#)

Python, FAISS, BM25, sentence-transformers, FastAPI, Docker

- Built a RAG pipeline without LangChain that answers questions over 37 engineering documents with numbered citations, and refuses off-topic questions through a similarity gate.
- Implemented hybrid retrieval (dense FAISS search + BM25, merged with reciprocal rank fusion), raising top-1 accuracy to 93% from 86% for either method alone.
- Created a 54-question evaluation set to tune retrieval mode, refusal threshold and chunk size; shipped with structure-aware chunking, a FastAPI web UI, Docker image, CI and 42 tests.

Actify | AI-Powered Meeting Action Tracker [\[GitHub\]](#)

React 19, TypeScript, Node.js, Express, SQLite, JWT, Gemini AI API

- Converts unstructured meeting notes into assignable action items using the Gemini LLM API.
- Implemented JWT auth, per-user task ownership, and task tracking, filtering and export.

Customer Churn Prediction System [\[GitHub\]](#)

Python, Scikit-learn, FastAPI, Machine Learning

- End-to-end ML pipeline predicting SaaS churn, from feature engineering to threshold-tuned evaluation.
- Served single and batch predictions through a FastAPI service with versioned model artifacts.

EDUCATION & CERTIFICATIONS

BSc (Hons) in Information Technology, Cloud Computing

2025

Sri Lanka Technological Campus

AWS Cloud Practitioner Training

Completed
